FY27 PLAYBOOK

GLOBAL TRANSFORMATION SUCCESS (GTS)

September 2026

Practice Objectives and Key Results (OKRs)

Foster Lifelong Customer Loyalty	Drive Transformation to include Technology, People and Process Deliver First Value within the first 90 days of deployments Ensure a Zero-Fault experience, from purchase to Operationalization
Codification of All learnings	Convert tacit field experience into documented, Explicit Knowledge Structure knowledge for Universal Consumption Utilize AI Tools to enhance the efficiency of knowledge capture and delivery

The 3 Pillars of Transformation

Tools Modernization

Accelerate Platform Deployment and Operational Readiness Establish an Operating Model to drive the adoption of AI, Automation, and AI Agents.

Legacy tools successfully replaced by the Agentic Defense Platform for Security and Cloud Operations

People Transformation

Drive Platform Adoption by enabling practitioners within their own environment and leveraging their existing enterprise infrastructure.

Practitioners are fully bought-in and completing 85%+ of their tasks within the platform.

Process Optimization

Support leaders to restructure internal processes and teams, optimizing them to leverage the full potential of AI and Automation.

Teams and internal processes are successfully redesigned to align with the operating model of a modern SOC.

MEET THE TEAM

NAM
1. Steven Riley
2. John Caimano
3. Devin Johnstone
4. Job Asiimwe
5. Eric Bardakos
6. David Falcon

EMEA
1. Nana-Ampofo Ampofo-Anti
2. Gareth Baruch

JAPAC
1. Deepu T V
2. Jithin Thomas Andoor

GLOBAL LEADER

SCALING WITH GCS
Leader: Akil Crawford

SCALING IN LATAM
Leader: Luis Castro

The Team | Strategic and Global Impact

ARCHITECTURAL OVERSIGHT

- Design Validation
- Architectural integrity
- Outcomes driven
- Issues resolution
- PM & ENGR interlock

VALUE REALIZATION

- Define and validate
- Operationalization
- Quantifiable benefits
- KPI tracking
- Alignment to business goal and end-state

THOUGHT LEADERSHIP

- Expert insights
- Credibility
- Innovation
- Communication
- Influence
- Content creation
- Process creation

EXECUTIVE PRESENCE

- Value realization executive updates
- Collaborate with PANW executive sponsor
- Customer executive advisory

TENETS FOR SUCCESS

Chief Architect Mindset
Technical Authority

Codification
AI First Mindset
Frameworks + Best Practices
Publications
Operationalization FIRST
Internal Processes Improvements

Early Engagement
SFDC Stage 3-4+

Cross Functional Leadership
PS, CS, EE, PM, ENGR, Sales

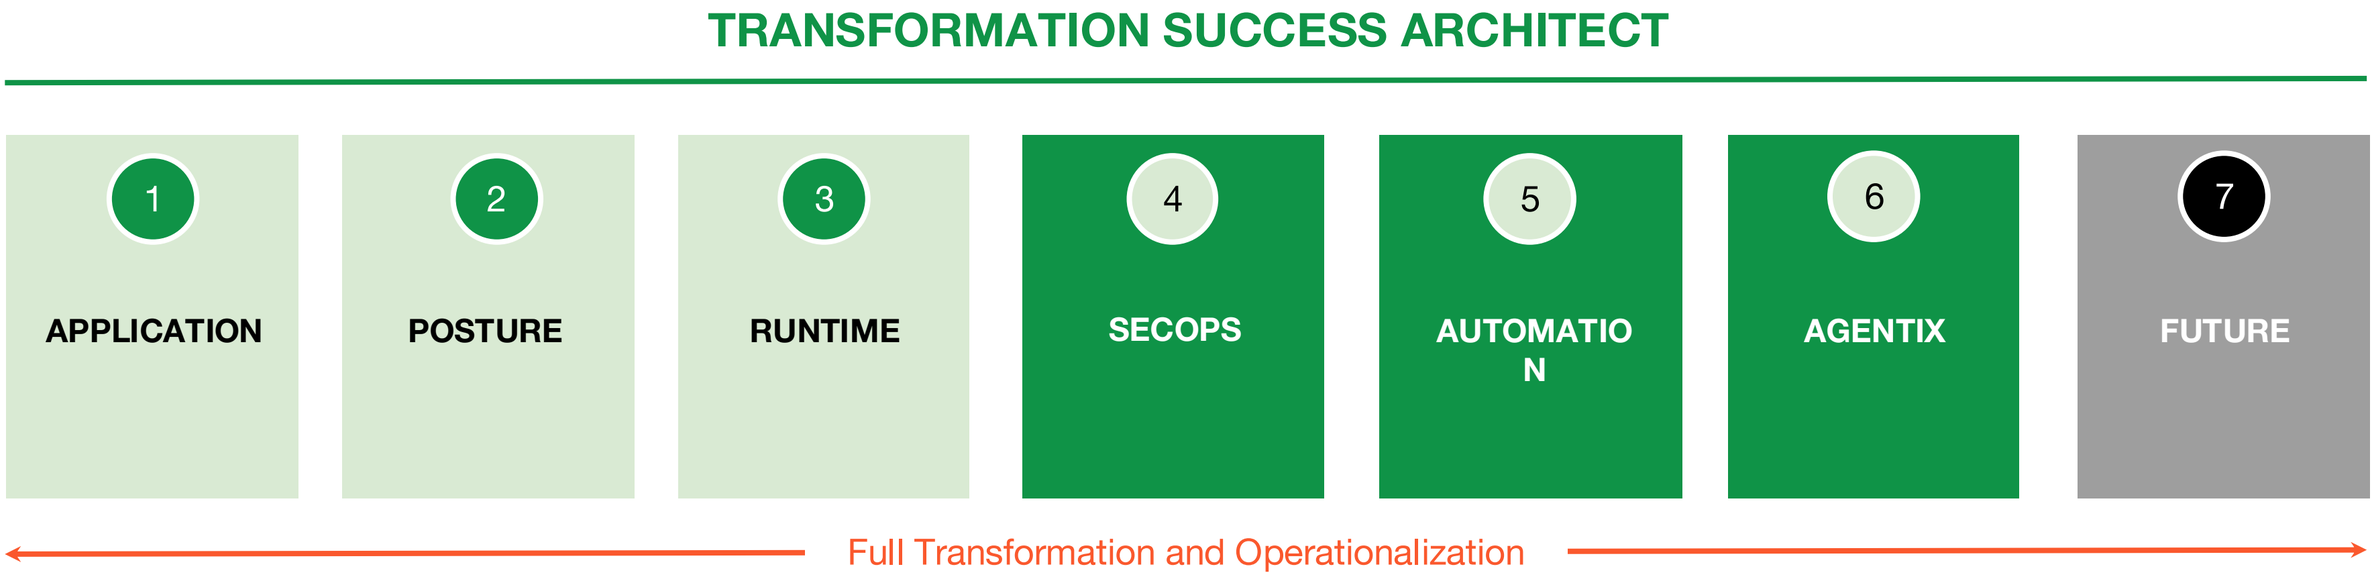

Consultancy + Advocacy
Analysts, SOC Leaders, GRC teams
Executives (Value Realization)

Customer Focus
$10M+ TCV (TSA)

paloalto NETWORKS | CORTEX

Evolving to Platform Architecture in FY27

In FY27, our objective is to evolve beyond traditional Security Operations. By integrating application security, cloud posture, and cloud runtime into our strategy, we will drive a comprehensive transformation that delivers the full promise of Platformization to all customers.

What has worked | TSA Engagement and Value

Pre sales at SFDC 3-4+:
Design Validation (DV)

> Error prevention
> Technical risk quantification and mitigation
> Internal Alignment (Various post-sales teams)
> Deployment alignment to the “Expected Value”
> Design Validation AI Tool

Mid deployment:
DITL Workshops Series

> Series of workshops focused on enabling the “Practitioner” in their environment using their data
> Operationalization and Adoption FIRST

Full deployment:
Value Realization

> “As-built” and “Value” alignment
> Value Realization motions (Executives)
> Codification of all best practices

PO EXECUTION

> Product | PS | Partner
> $2.5M+ ARR or $10M TCV
> PS Resources Identified

At deployment start:
Architectural Direction & Authority

> Final Architecture Defined
> Risk Mitigation Plan Finalized
> Alignment of all post-sales groups (PM, PS,EE,CS…)
> Time-to-First Value defined (90 days)

During deployment:
Architectural Oversight

> Thought Leadership and Technical Authority
> Alignment on Expected Value (Internally & Externally)
> Cross-functional Leadership & Executive Consultancy
> Risk Plan Execution
> PM, ENGR & TPE Interlocks

NORTH STAR = FOSTERING LIFELONG CUSTOMER LOYALTY

** DITL = Day-in-the-life Workshops*
*** TTV(D) = Time-to-Value (Deploy)*

DESIGN VALIDATION

GLOBAL TRANSFORMATION SUCCESS

The Cortex Design Validation

The Cortex Design Validation (DV) enhances the account team's design process, increasing the likelihood that the Cortex Platform successfully delivers Transformation and Value Realization outcomes for customers.

Error Prevention: Minimizing product quote errors and missing components.

Early Technical Risk Identification: Ensuring mitigation plans are in place for all technical or product issues.

Deployment Alignment: Guaranteeing the Delivery team's plan aligns with the value promised to the customer.

Accelerated Value Realization: Demonstrating and delivering first value in 90 days.

Zero Fault Customer Experience: Ensuring the flawless deployment of the platform.

The Cortex Design Validation AI Tool can be found here.

Design Validation Documents List

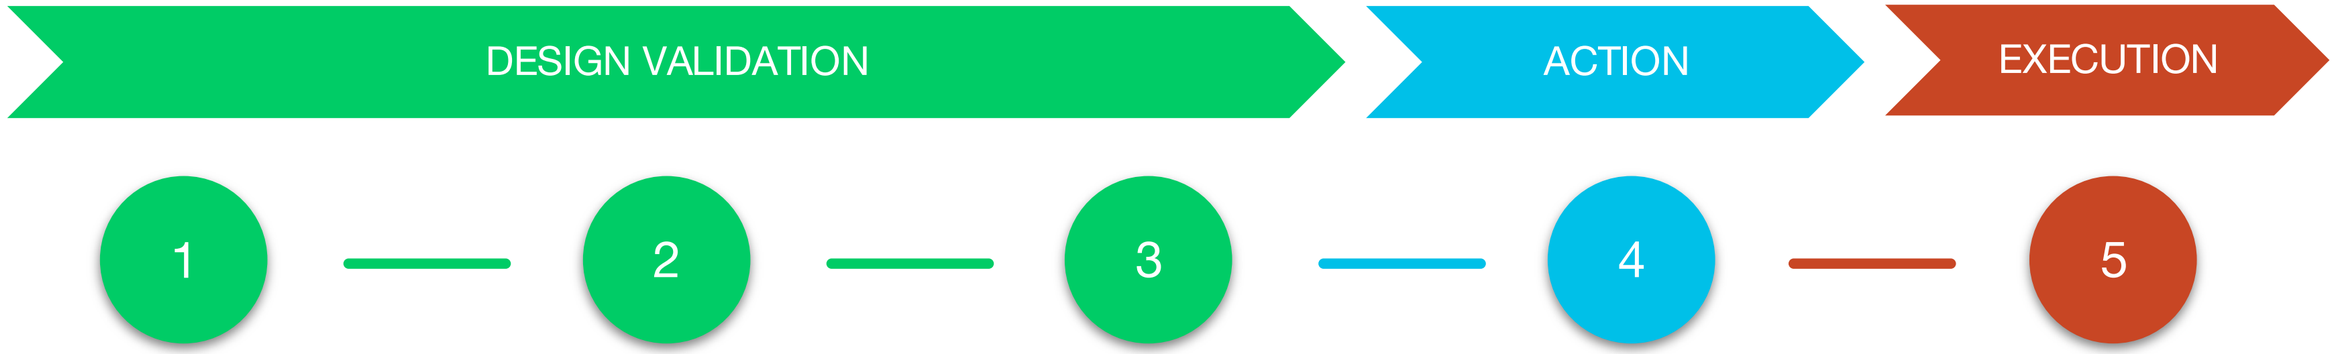

The following documents are required in order to conduct a successful Design Validation :

- Utilize the Cortex Design Validation Tool to ensure all codified checks are completed.

To successfully conduct a design validation, the following required documents must be fully completed:

- Business Value Consulting (BVC) document
- Solutions Design Workbook (SDW) and Design of Record (DoR)
- Proof of Value Readout
- Customer Journey Blueprint
- Professional Services Statement of Work (SOW)

Design Validation Steps

1 OPPORTUNITY ASSIGNMENT

Opportunities assigned from the DV Tool

All $5M-$10M Cortex XSIAM Opportunities are Eligible

TSA Team to perform DV for $10M+ Opportunities

2 VALIDATION CHECKLIST

TSA finalizes validation in collaboration with all pre-sales teams (Sales, Specialists, SC, DC and PS Pre-sales)

All technical and operational artifacts must be properly documented

3 FINAL DELIVERABLE

Ensure section 8 is properly populated and edited to include:

Top Risk (Blockers)
Ops or execution Risk Mitigation Plans
(that list specific actions, owners and statuses)

4 ACTION OR RISK ACCEPTANCE

Sales team to take corrective actions prior to deployment kickoff

If corrective action cannot be executed prior to deal-close, Pre-sales leadership to accept risk

5 POST-SALES HANDOFF

Share the Deliverable with the post-sales team:
PM, PSC and/or SteerCo

Project Manager to include mitigation plan to the overall deployment plan and strategy

TSA provides architectural oversight

VALUE REALIZATION

GLOBAL TRANSFORMATION SUCCESS

Value Realization

The Business Value Consulting (BVC) framework is the essential blueprint for guiding value delivery by the Global Customer Services (GCS) team.

Deployment and Value Alignment

- Deployment to Business Value: Deployment plans must strictly align with the Business Value Chain (BVC) and the value anticipated during pre-sales.
- Statements of Work (SOW): All delivery SOWs must directly reflect the value outcomes promised in the BVC documentation.
- Executive Visualization: Provide concrete visualizations and dashboards for executive customer updates to demonstrate realized value.

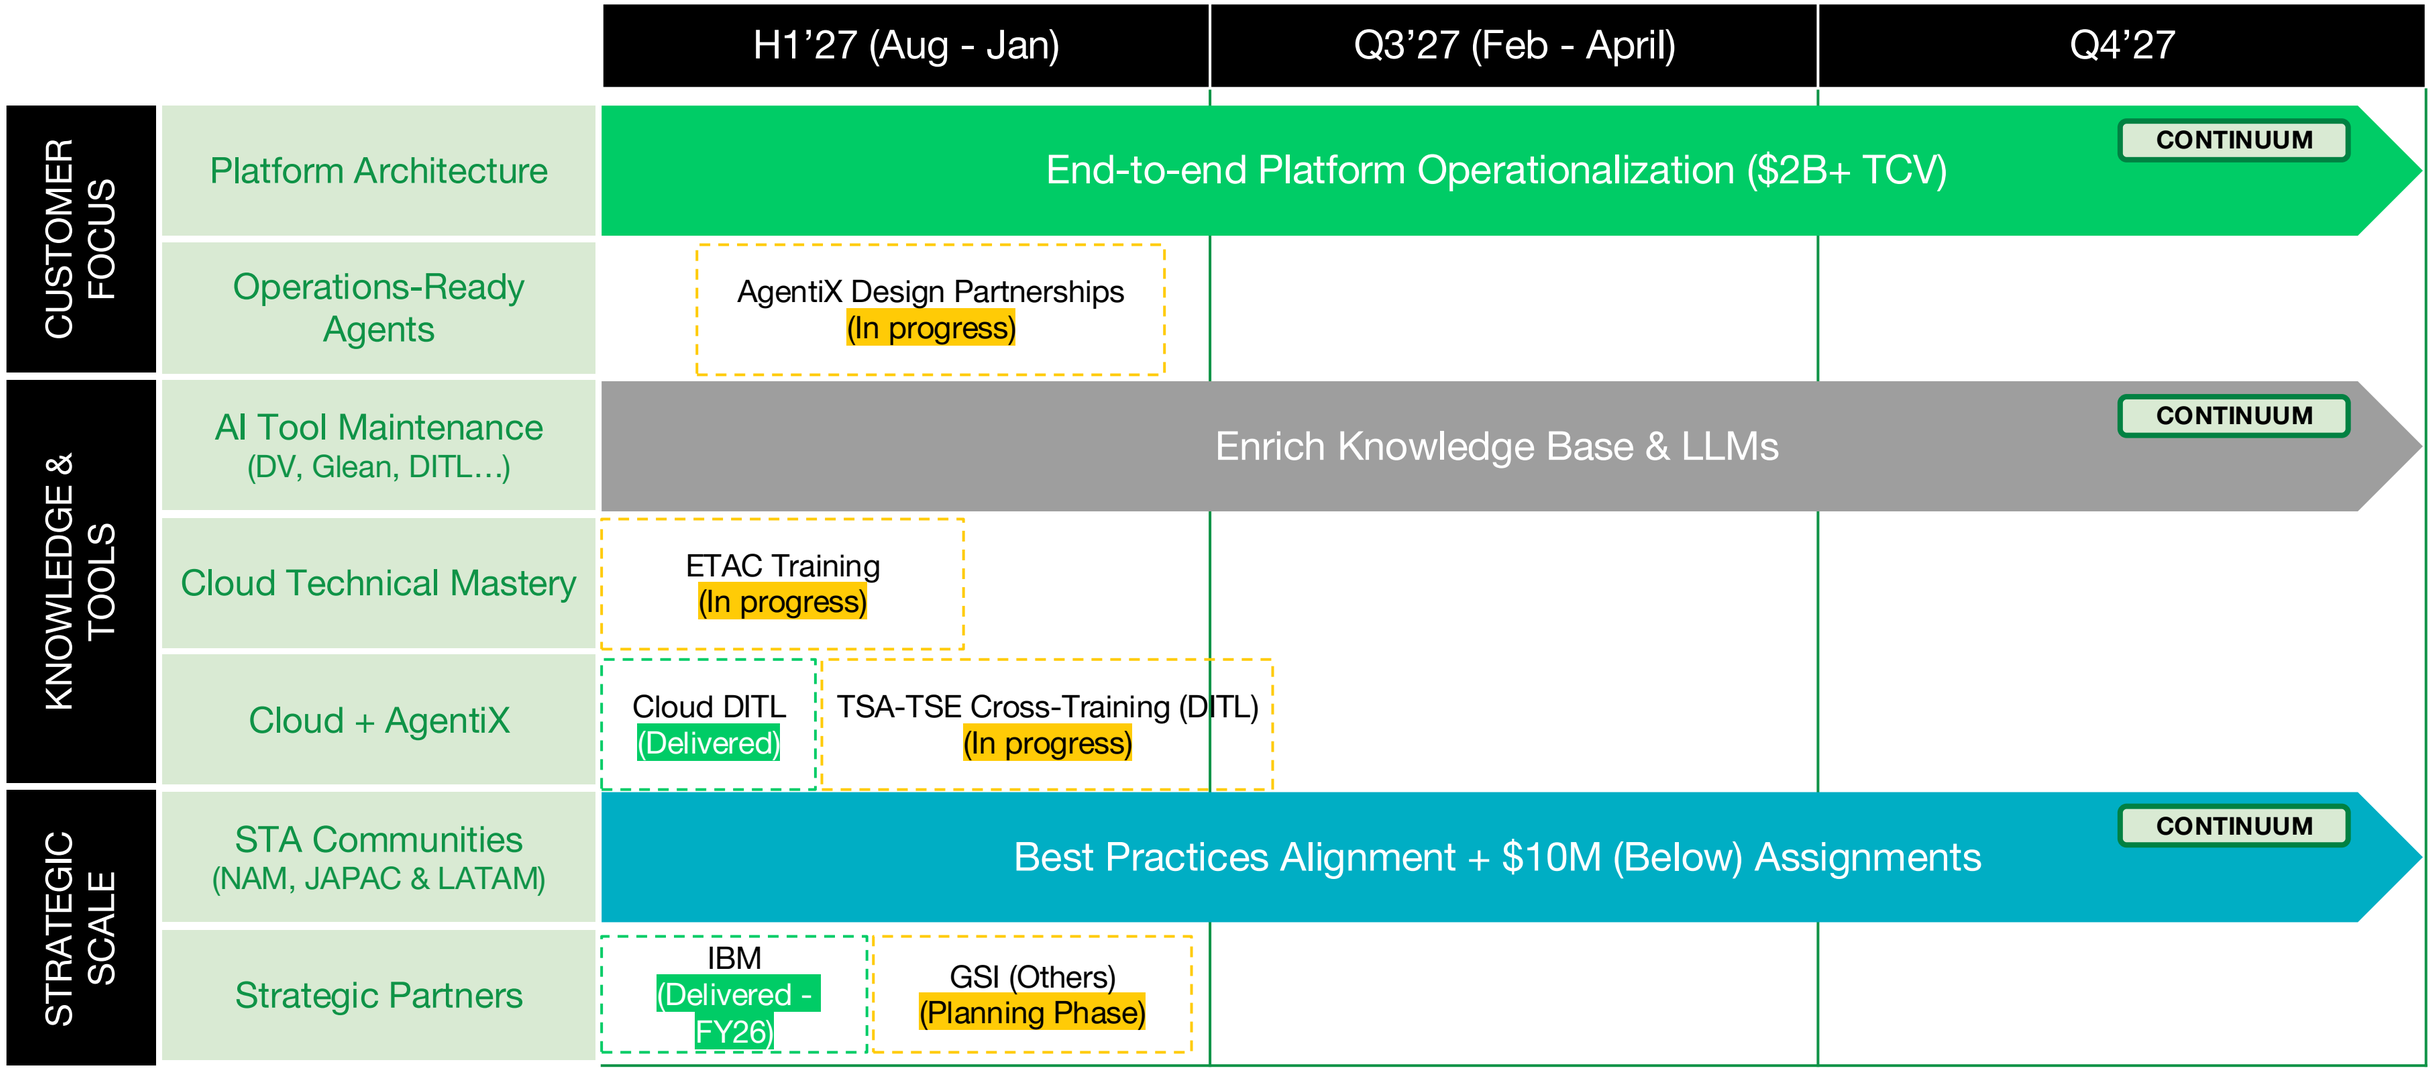

The Transformation Success Team is aligned with both the Business Value Consulting and Value Realization teams.

Example Presentation (Job Asiimwe)

ROADMAP

GLOBAL TRANSFORMATION SUCCESS

FY27 Roadmap

PRODUCTIVITY TOOLS

GLOBAL TRANSFORMATION SUCCESS

The Day-in-the-life (DITL) series

The DITL Side Deck generation script can be found here
The DITL material can be found here

The Day-in-the-Life (DITL) is a standardized process for driving faster adoption and ensuring long-term customer success. It consists of practitioner-focused workshops and training to align customer teams with Cortex capabilities.

Core Objective: To "operationalize" Cortex by ensuring practitioners can successfully apply the platform to their daily SecOps and Cloud workflows.

Target Audience: Primarily practitioners (SOC analysts, Cloud engineers…) and leaders.

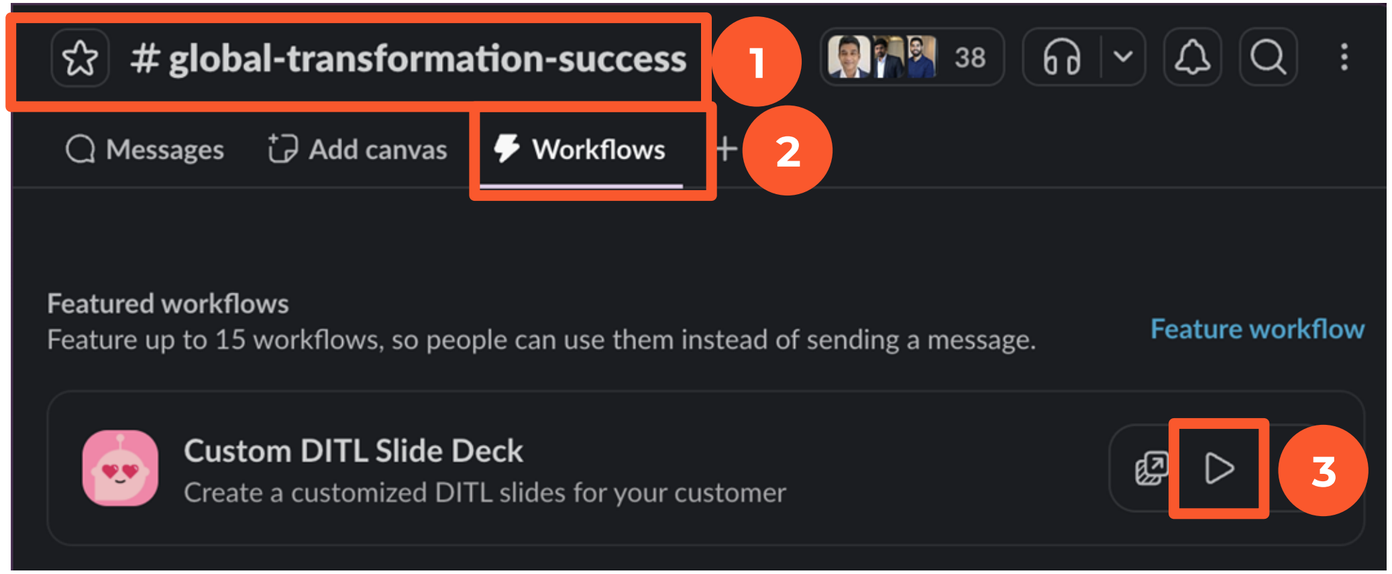

Timeline: Conducted mid-deployment to help customers achieve "First Value" in 90 days and full Value Realization upon complete deployment.

Key Topics: Practical, hands-on enablement using the customer's tenant and data, covering: Platform usage ("How to use"), Platform management ("How to manage") and Automation (applying AI/ML, Automation, and AgentiX)

Auto-Creation of DITL Content

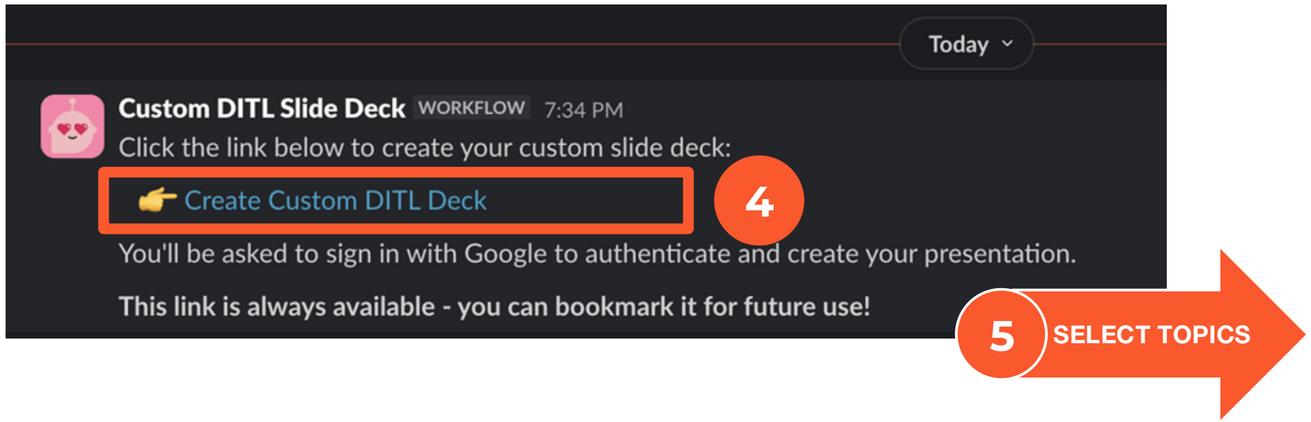

The GTP Slack Channel and Slack-bot (*#global-transformation-practice*):

- Integrates with Glean for near-instant responses by simply tagging *@glean*
- Automates the creation of Day-in-the-Life (DITL) content and narratives using Slack prompts, tailoring content to specific customer personas and workflows.

GTP App and Slackbot material can be found here

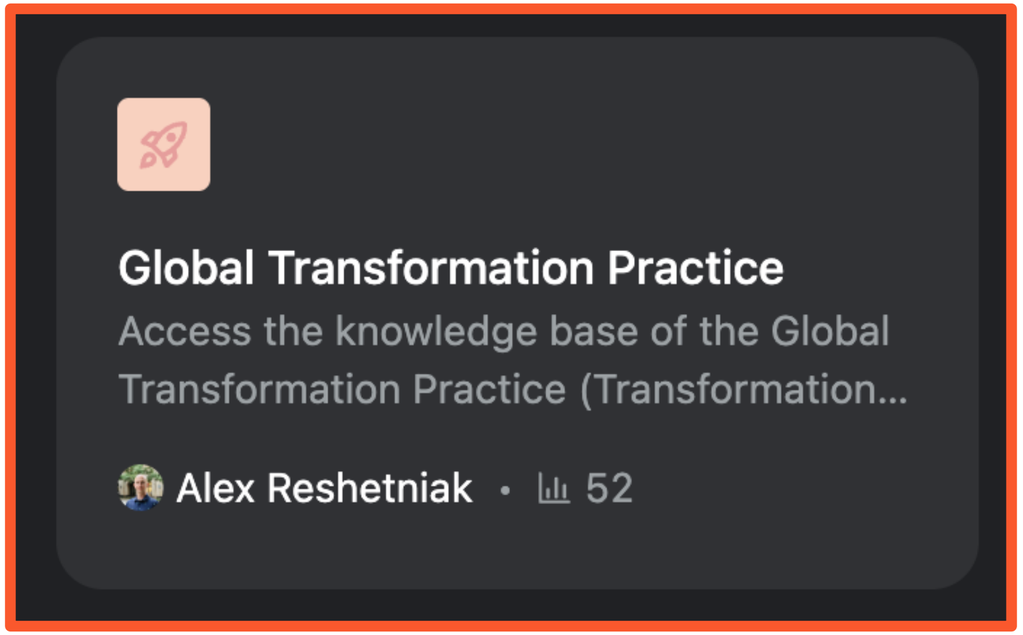

Auto-Creation of DITL Content

- Cortex XSIAM Introduction & Overview
- Unified Data & AI Analytics
- Cortex XSIAM 3DR Support
- Cortex XSIAM Analytics & Detections
- Cortex XSIAM Investigation Flow
- AgentiX Automation
- Additional Topics
- Risk Prioritization - Smart Score
- Exceptions
- Incident Response & DFIR
- Cortex XSIAM Endpoint Security (EPP & EDR) & 3DR
- SOC Framework - Catch All
- Palo SOC Best Practices
- XDR Agents
- Machine Learning
- SOC Metrics (MTTD, MTTA, MTTR)
- Additional Modules (More to come!)

GTS App and Slackbot material can be found here

The GTP Glean App

The Global Transformation Success (GTS) App, built in Glean, serves as a centralized hub for team knowledge and assets. Key features include:

- Instant querying for best practices, templates, and technical knowledge using free-form questions.
- Dynamic context powered by information collected from the TSA Google Drive.
- Standardized common queries through pre-defined prompts.

GTS App and Slackbot material can be found here

Workspaces And Enablement

Where We Work (Asana)

Asana is our central hub for respective Team spaces (trackers and templates) as well as active Portfolios.

GTS TSA Team

- Team Hub (Trackers & Templates)
- Active Portfolio (TSA SOC)

GTS TSE Team

- Team Hub (Trackers & Templates)
- Active Portfolio (TSE FY27 Migration)

Tip: Be sure to bookmark your team's Hub and Portfolio so you can easily access them!

GTS Cortex Training Curriculum

To ensure everyone is fully equipped, please complete the required training tracks:

Cortex Foundations (High-Level)

- Support Cortex Foundations
- Cortex Fundamentals in a Box
- Cloud Features
- Support Cortex Cloud Learning Nuggets
- Support Cortex Cloud Product Launch

Technical Deep Dives

- Cortex Cross Platform Resources
- Cortex XDR Agent TOIs
- All Cortex TOIs

Team Enablement

Team Shared Drive & Calendar

Check the team shared drive and calendar regularly to register for upcoming live training sessions, syncs, and engagements.

Training & Workshops Folder

Dedicated folder for trainings and recordings for Asana-specific trackers and mandatory team training.

GTS Loop Page

Learn why we do the things we do, share to external stakeholders and access our published content library.

Documentation & Support Resources

Coming Soon: The Confluence resources below are currently under construction. Keep an eye out for updates!

- **Cortex Cloud Platform Releases**
- **Cortex Support Page**

Advanced Tooling And Resources

Access our newly deployed automation and AI tools designed to streamline GTS operations and enablement.

DITL Auto-Generation

Automate the creation of Day-in-the-Life custom presentations quickly and efficiently. Ensure alignment with the latest practitioner standards.

Launch DITL Deck Generator

AI-Tools & Glean GTP App

Leverage the Global Transformation Success App via Glean for AI-assisted workflows, enterprise search, prompt management, and rapid data synthesis.

Access Glean GTP App

2023 , Inc. . .

Communication And Slack Directory

To reduce noise, all channels (except the public bot channel) are strictly private. Keep conversations in scope.

tag	#global-transformation-success	General inquiries, bot questions, broad visibility	Public
lock	#gts-team-internal	Internal announcements, day-to-day chat	Private (TSAs/TSEs)
lock	#gts-leaders	Strategic planning, escalations, cross-functional alignment	Private (Leaders)
lock	#gts-tsa-core / #gts-tse-core	Deep technical discussions, problem-solving & troubleshooting	Private (Core Only)
lock	#gts-tsa-extended / #gts-tse-extended	Updates, guidance, and technical sharing	Private (+ Others)

Shared Drive Directory And SOPs

Access the team shared G-Drive. An authoritative map of our shared drive. Adhere to governance rules for each workspace.

01_GTS General

Leaders (Edit), Team (View)

Administrative cores, templates, KPIs, and capacity tracking.

02_Playbooks & Frameworks

GTS Team (Edit)

Divides WIP drafts from finalized assets. Optimized for Glean.

03_DITL Content Library

Owners (Edit), Team (View)

Repository for Day-in-the-Life practitioner enablement.

04_Design Validation

DV Owners (Edit)

Standalone library hosting DV checklists, scorecards, and refs.

05_Customer Engagements

GTS Team (Edit)

Active working directory for account artifacts and recordings.

07_Team Working Folders

Individuals (Edit)

Primary sandbox. Rename "WIP" to "V1" to auto-route files.

2023 , Inc. . .

RACI

GLOBAL TRANSFORMATION SUCCESS

Key Roles and Responsibilities

Transformation Success Architect* (TSA)

Mission: Drives the "Transformation" of the customer's operation by shifting mindsets from manual operations to an agentic defense security and cloud operations.

Architectural Authority: Leads the definition of the final architecture and provides oversight to ensure "Zero-Fault" execution.

DITL Lead: Directs and delivers the Day-in-the-Life (DITL) workshop series, which focuses on enabling practitioners using their own data in their own environment.

Product Interlock: Maintains interlocks with PM/Engineering to prioritize and resolve deployment "blockers".

Professional Services (PS) - Project Manager & Consultant

Mission: Executes the implementation and configuration of the platform.

Milestone Execution: Responsible for the technical configuration of the platform.

Incident Response (IR) Workflow: Drives the automated deployment of Workflow packs

"As-Built" Delivery: Responsible for delivering the final "As-Built" documentation and achieving the initial BVC metrics.

*This function is performed by the TSA for deals above $10M or by the GCS Architect for deals below $15M

Key Roles and Responsibilities

Service Delivery Lead (SDL)

Mission: Focuses on long-term account health and ensuring the customer realizes the promised ROI.

Success Criteria Tracking: Participates in Value Realization Reviews to track KPIs like MTTC/R

Handoff Leadership: Leads the permanent transition from the deployment phase into the Scale & Optimize phase.

Solutions Consultant (SC) or Domain Consultant (DC)

Mission: Provides technical continuity and "Voice of the Customer" during the transition to deployment.

Design Validation Partner: Responsible for completing the Design of Record (DoR) and Solutions Design Workbook (SDW) and supporting the TSA during formal Design Validation.

Shadowing Capacity: Remains engaged in a "shadowing" capacity via the post-sales TRR to ensure no technical knowledge is lost during the handoff.

Key Roles and Responsibilities - Project Management

The Professional Services PMO is the tactical engine that ensures the transformation strategy set by the TSA is executed on time, within budget, and according to the Statement of Work (SOW). While the TSA provides the "Architectural Authority," the Project Manager provides the "Operational Governance." The PM and TSA must operate in a "Two-in-a-Box" model to avoid project derailment:

PM : Owns the SOW and Schedule. They are responsible for tracking hours consumed vs. hours purchased and ensuring the customer completes their "homework" (e.g., firewall allowlisting, VM provisioning).

TSA : Owns the Outcome and Architecture. They ensure the technical design actually solves the customer's business problem

Project Manager (PM)'s role in a deployment:

Initiation	Secures PSCs and ensures they are assigned within 24–48 hours of deal close.
Planning	Defines the communication plan, weekly cadence, and establishes the project in Clarizen/Asana.
Execution	Manages the technical "pit stops" (e.g., Data Source Onboarding, Correlation Phase) to keep Time-to-Value (TTV) under the 90-day target.
Risk Management	Acts as the "Traffic Controller" for issues—escalating technical gaps to the TSA and contract/timeline risks to PS Leadership. Track the execution of the "mitigation" plan initiated during the Design Validation phase
Closure	Manages the delivery of "As-Built" documentation and ensures the customer signs the Deliverable Completion Certificate.

RACI Chart

Activity / Milestone	TSA*or STA	PS (PSC + PM)	CSE/SDL	SC/DC	PM/ ENGR
Design Validation (DV)	A/R	C	I	R	C
"Kickoff 2.0" (Value Alignment)	C	A/R	C	C	I
SOC Blueprint / Workflow Discovery	A/R	R	I	C	I
Rapid Deployment (IR Workflow Pack)	C	A/R	I	I	C
Day-in-the-Life (DITL) Workshop Series	A/R	C	C	I	I
Technical Risk Plan Execution	A	R	C	R	C
"First Value" Delivery (90-120 Days)	A	R	R	I	I
Issue Triage & Product Interlock	R	R	C	A	A/R
Value Realization Review (Final)	R	A	A/R	R	I

Responsible : Does the work
Accountable : Signs off/owns the result
Consulted : Provides input/expertise
Informed : Keeps Updated
*$10M+ deals will be assigned to TSA

Process for Sales Funded Engagements

- NOTE: There is a process for sales funded engagements. Sales reps are responsible for driving this. This will need multiple approvals through the sales organization starting with their VP, then SVP etc.

- Who is responsible for what:
  - TSA: responsible for identifying the core issues requiring the funding. This needs to be aligned with health findings and establish the cause of re-entry. TSA should work with PS and ensure PS has capability and resourcing to assist with this. TSA is responsible for informing PS on the health status and expected outcomes and work streams that have been identified.

  - Sales Team: Need to support the findings and be able to articulate at a high level what they were. TSA can assist by providing a one paragraph summary of why the funding is needed and how this will bring business value to ensure we keep the customer.

- Often the sales team doesn't know what to do or where to start
  - The following document lists the process for Sales Funded Engagement

- Approval Process:
  - The Sales person submitting this request will receive all the approval notifications. The most important is the "financial funding". DO NOT tell a customer they have resourcing until all the approvals have been complete.
  - There will be a $0 SOW generated that will need approval by the customer. This is needed before any engagement will start

Large accounts with NO SDL Coverage

- In certain circumstances SDL engagement on an account may need to funded.

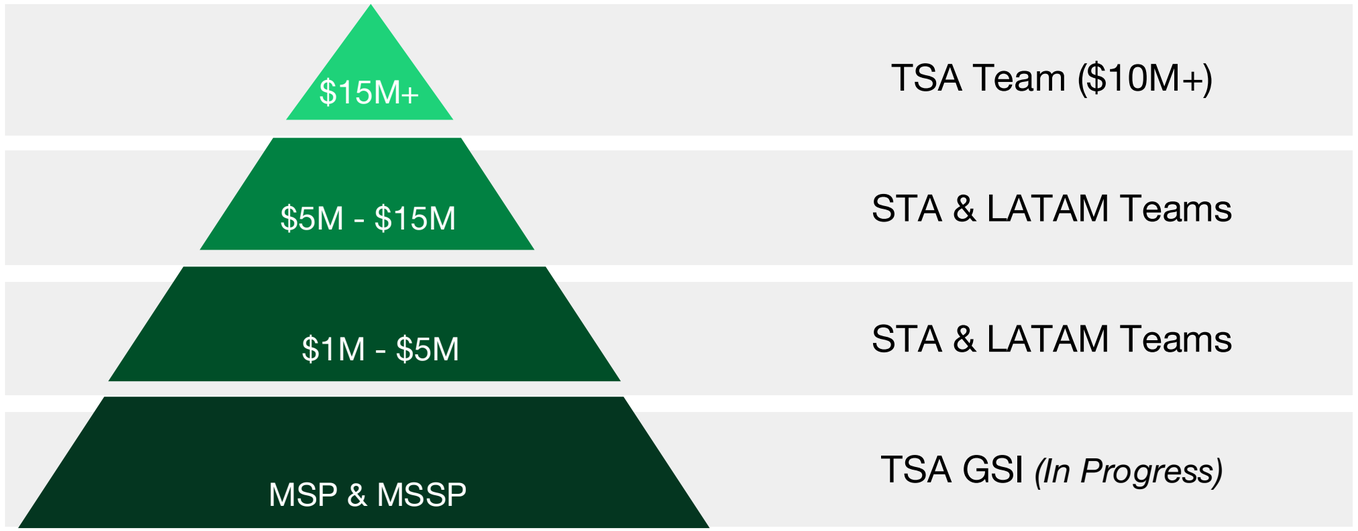

- Please work with anbose@paloaltonetworks.com (Ankana Bose) as there are certain conditions for this process. GTM team as a process they can provide guidance to achieve this.

- Highlighted is the current SDL Support for At-Risk accounts
  - SDL Support
