Entitlement Translation

Prisma Cloud Credits to Cortex Cloud Workloads

Simon Melotte | Senior Solutions Architect Cloud
Daniel Tor | Senior Solutions Architect Cloud

Our Goal & Mission

Simplify the Process

Ensure Accurate Data

Save Time

How are we doing this

- **New intuitive experience with a Translator Application**
  - Existing Customer Workflow
    - Suggested conversion based on existing data. Conversion is calculated based on billable assets and their conversion ratio to a workload.
    - Dynamic modification of input/output
  - New Customer Workflow

- **Continuous data collection with scripts**
  - Collection of data from all customer tenants (PCS Support App)
    - Full inventory of billable workloads
      - VMs, Serverless, Databases, Storage, CaaS, Developers, Agents & more
    - Tenant details
    - Existing license bundle & usage
    - Support Level
  - (On request) Ad-hoc collection of single customer

Translation overview

Prisma Cloud

Purchased: xx credits

Current consumption: xx credits

Utilization rate: xx%

Assets protected:

- xx Posture-only VMs/hosts
- xx VMs/hosts with agents
- xx serverless functions with agents
- xx Buckets
- xx Managed Cloud DBs
- xx Developers

Workloads needed to cover current assets

- xx Cloud Posture Security workloads
- xx Cloud Runtime Security workloads
- xx Application Security add-on

Cortex Cloud

Workloads scaled to match purchased credits**

- xx Cloud Posture Security workloads
- xx Cloud Runtime Security workloads
- xx Application Security add-on

1-2-1 translation based on **100%** consumption of the current Prisma Cloud license

**Includes adjustments to meet minimums

3. Based on data from #1 & #2 calculate the conversion from Prisma Cloud credits to Cortex Cloud Workloads

How to use the Application

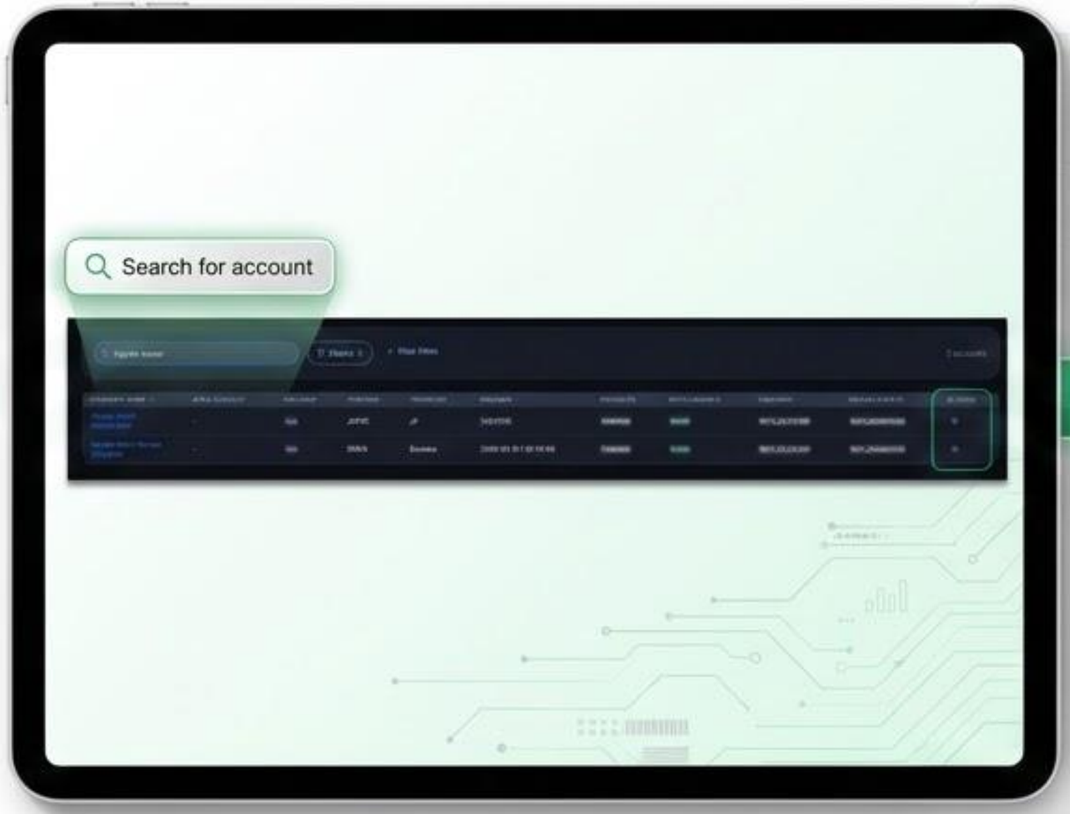

Step-by-step instructions

© 2024 Palo Alto Networks, Inc. .

Entitlement Translator App: Step 1

1. Access **Entitlement Translator App**

2. Search for account

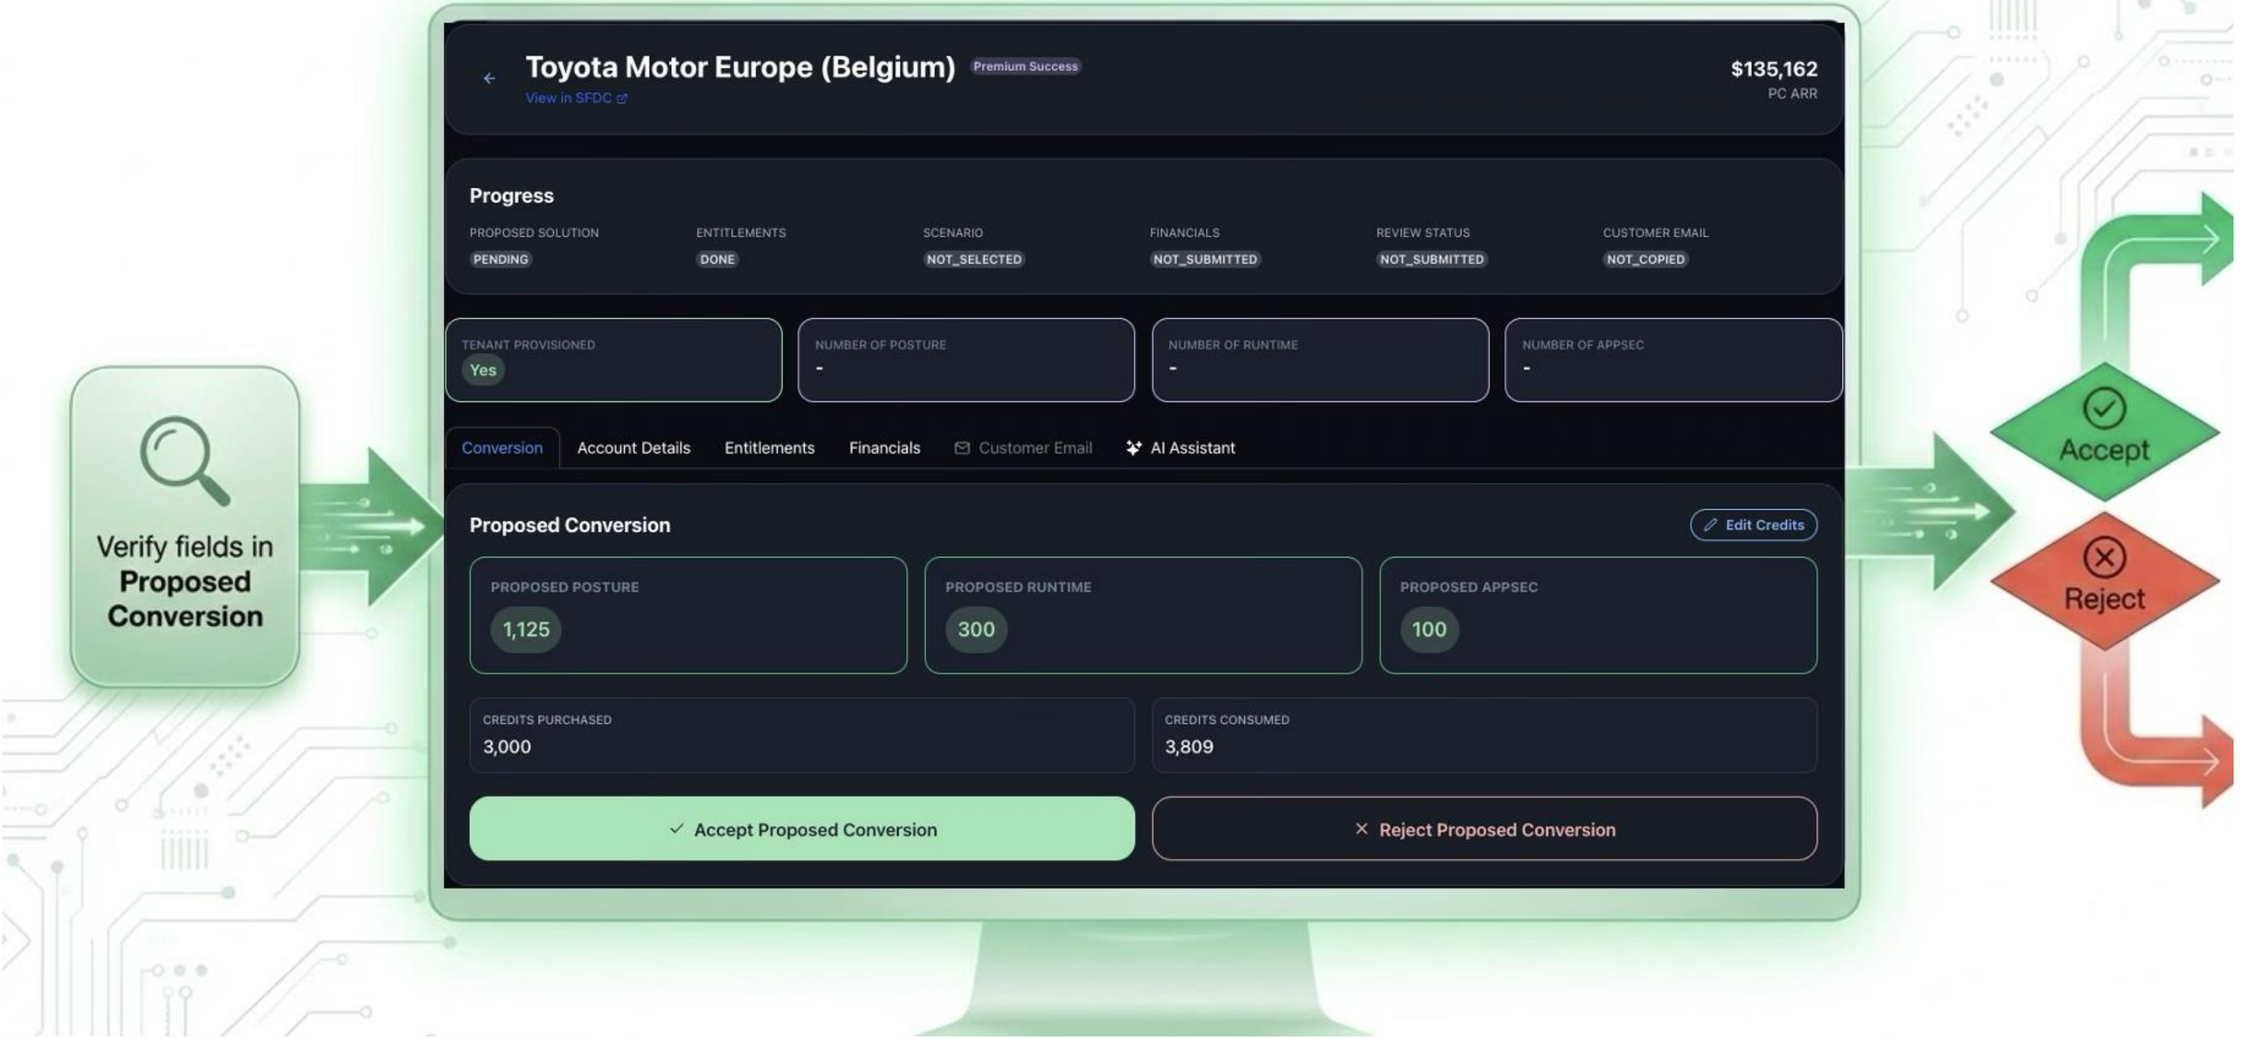

3. Click on **View**

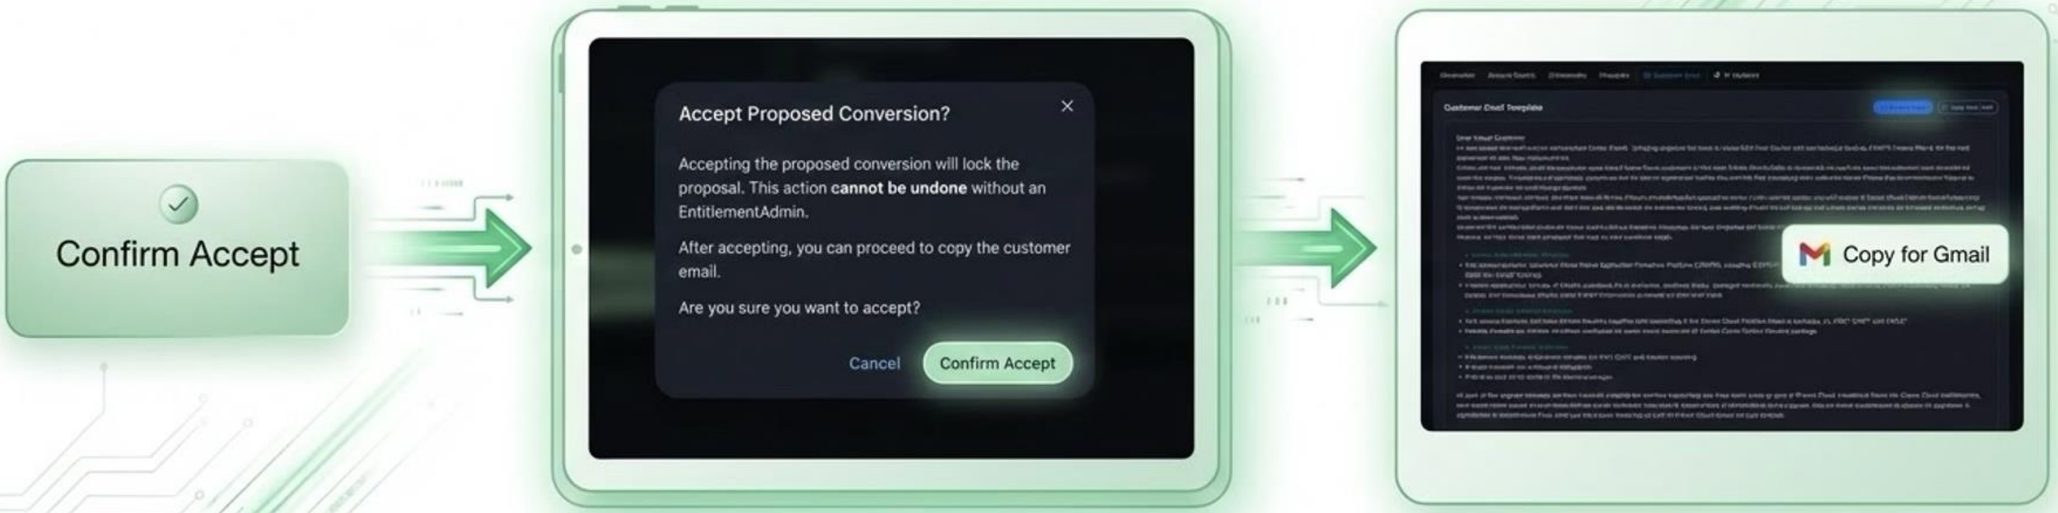

[Entitlement Translator App]

Future improvements

- Cortex Cloud Tenant merge with Cortex XSIAM or XDR
- Prisma Cloud MSSP (& Ramp-up Contracts)
- Overconsumption
  In overconsumption scenarios the total number of Posture / Runtime / AppSec are divided to end up on a 1:1 ratio. This doesn't take into consideration if customer enabled additional features which caused the overconsumption. Deeper account context & conversation with account contacts might be needed for better accuracy.
- Number Registry images
- Data collection missing from PCS Support Apps Work In Progress
  - GOV & CN
- *Flow Logs, DNS logs, audit logs datasize* - Work In Progress
- Data will be refreshed during the weekend (Jan 11th)

Extra

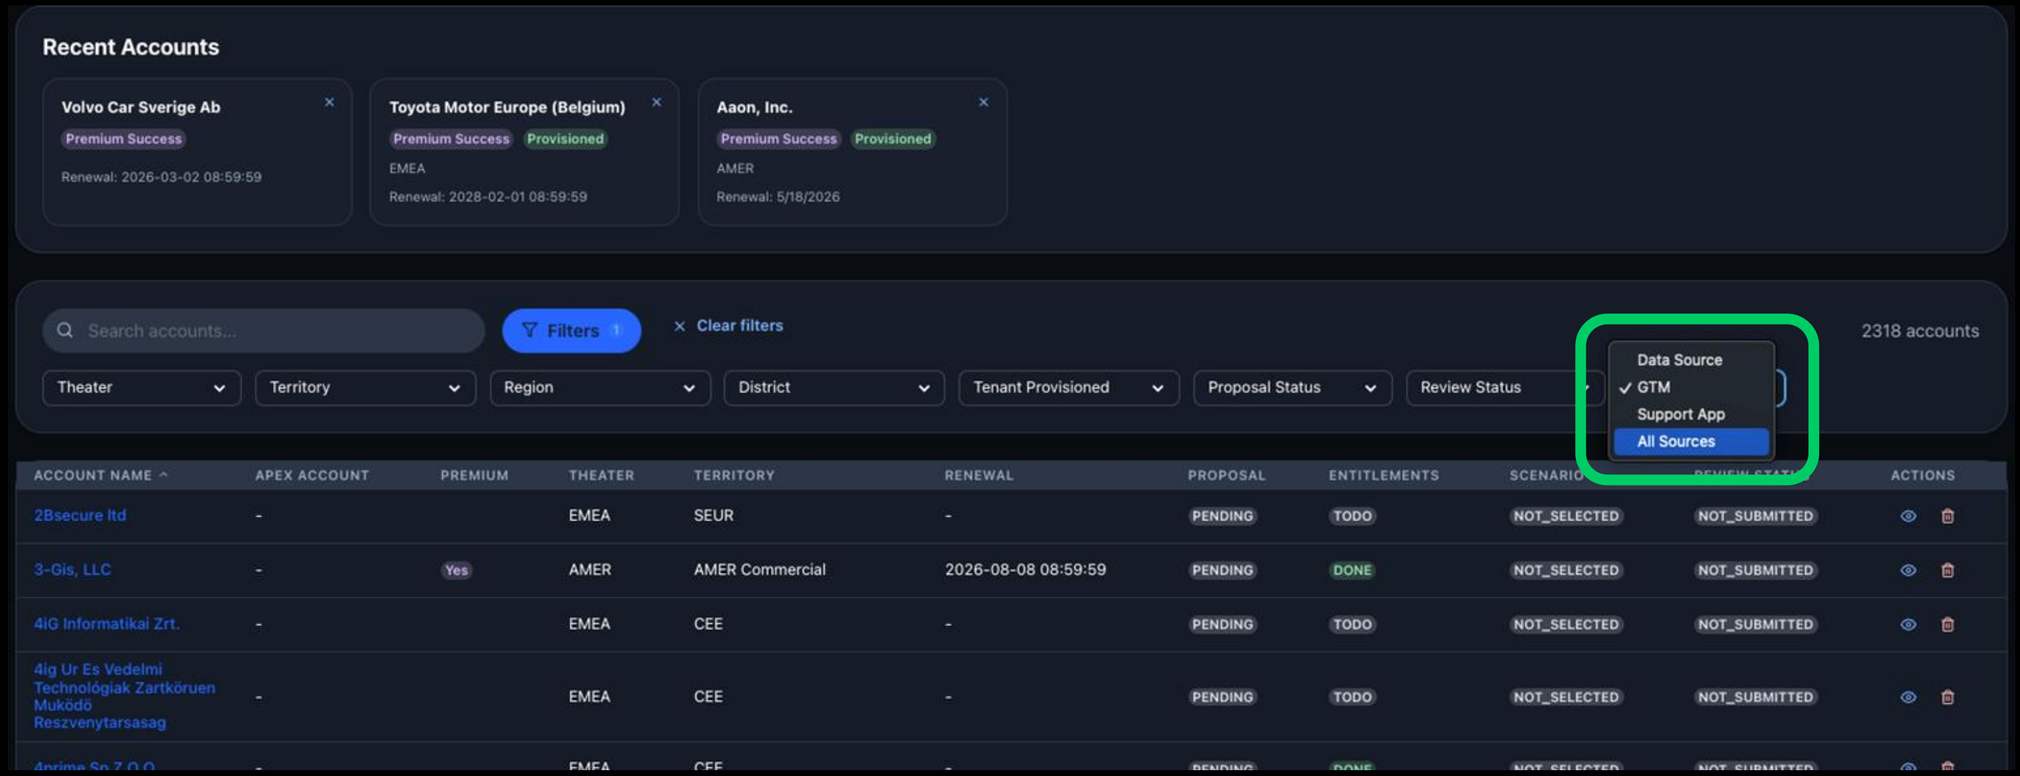

Verify Billable Assets - Cortex Workloads

	AWS	Azure	GCP	OCI
C1	S3 Buckets DynamoDB Tables RDS Databases Aurora Databases (counted with RDS api) Redshift clusters	Storage Accounts Cosmos DBs SQL databases (excl flexdatabase options) Managed SQL databases	Cloud buckets Bigtable instance Bigquery datasets SQL instances	Storage bucket
C1	EC2 instances EKS Nodes	Virtual Machines Azure virtual machine scale set instances AKS Nodes	Instances GKE Nodes	Instance
C1	AWS Lambda Functions Registry images	Azure Serverless Functions Registry images	GCP Cloud functions, Gen 1 & Gen 2 Registry images	Function
C3	XDR Agents CaaS XDR Agents (Fargate) Serverless XDR Agents	XDR Agents Serverless XDR Agents	XDR Agents Serverless XDR Agents	XDR Agents
App Sec	Number of developers	Number of developers	Number of developers	Number of developers

Cannot find the Account?

By default there are accounts imported from GTM data sheet. There have been a few occasions where accounts are missing. Modify the data source filter to “**All Sources**”.

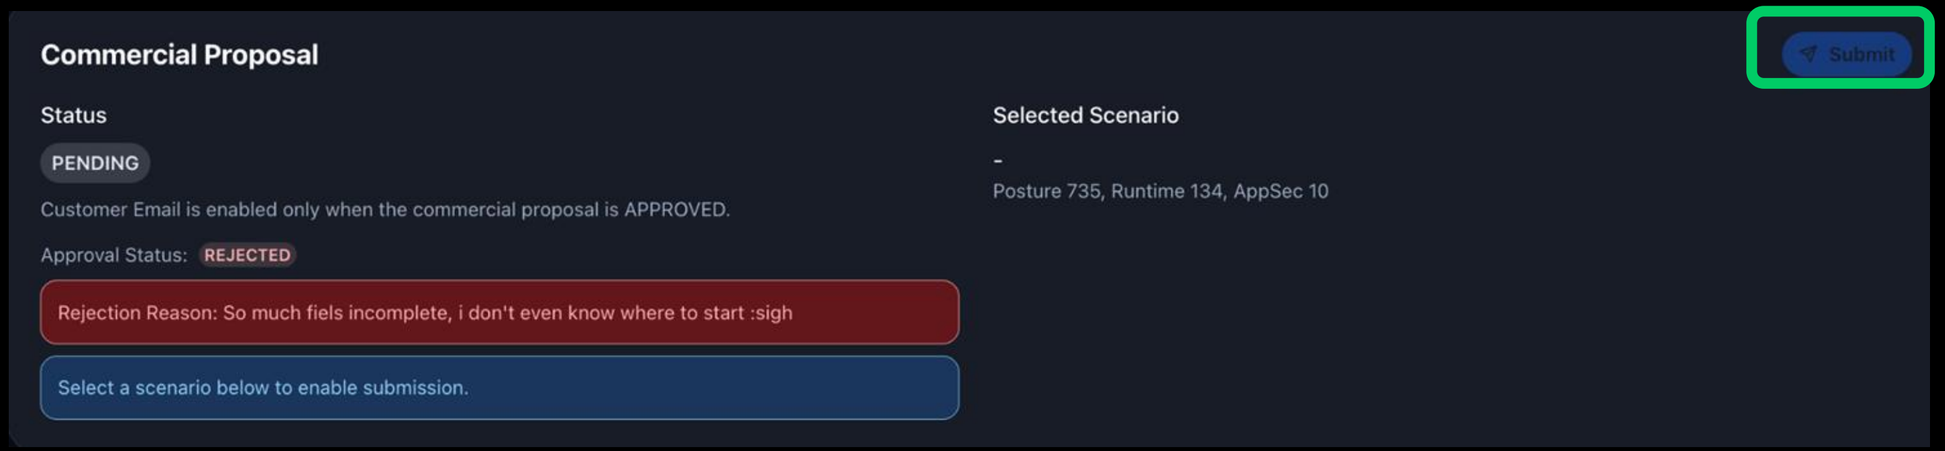

This will also show raw accounts with imported data directly from PCS Support Apps.

Approval of new entitlements

Contact Person: TBD
Escalation: Cortex-Cloud-GTM@paloaltonetworks.com
Target SLA for decision: 3 business days

Accepted and Rejected will create an automated email containing information around the reason. The status can also be tracked on the entitlement translation app.

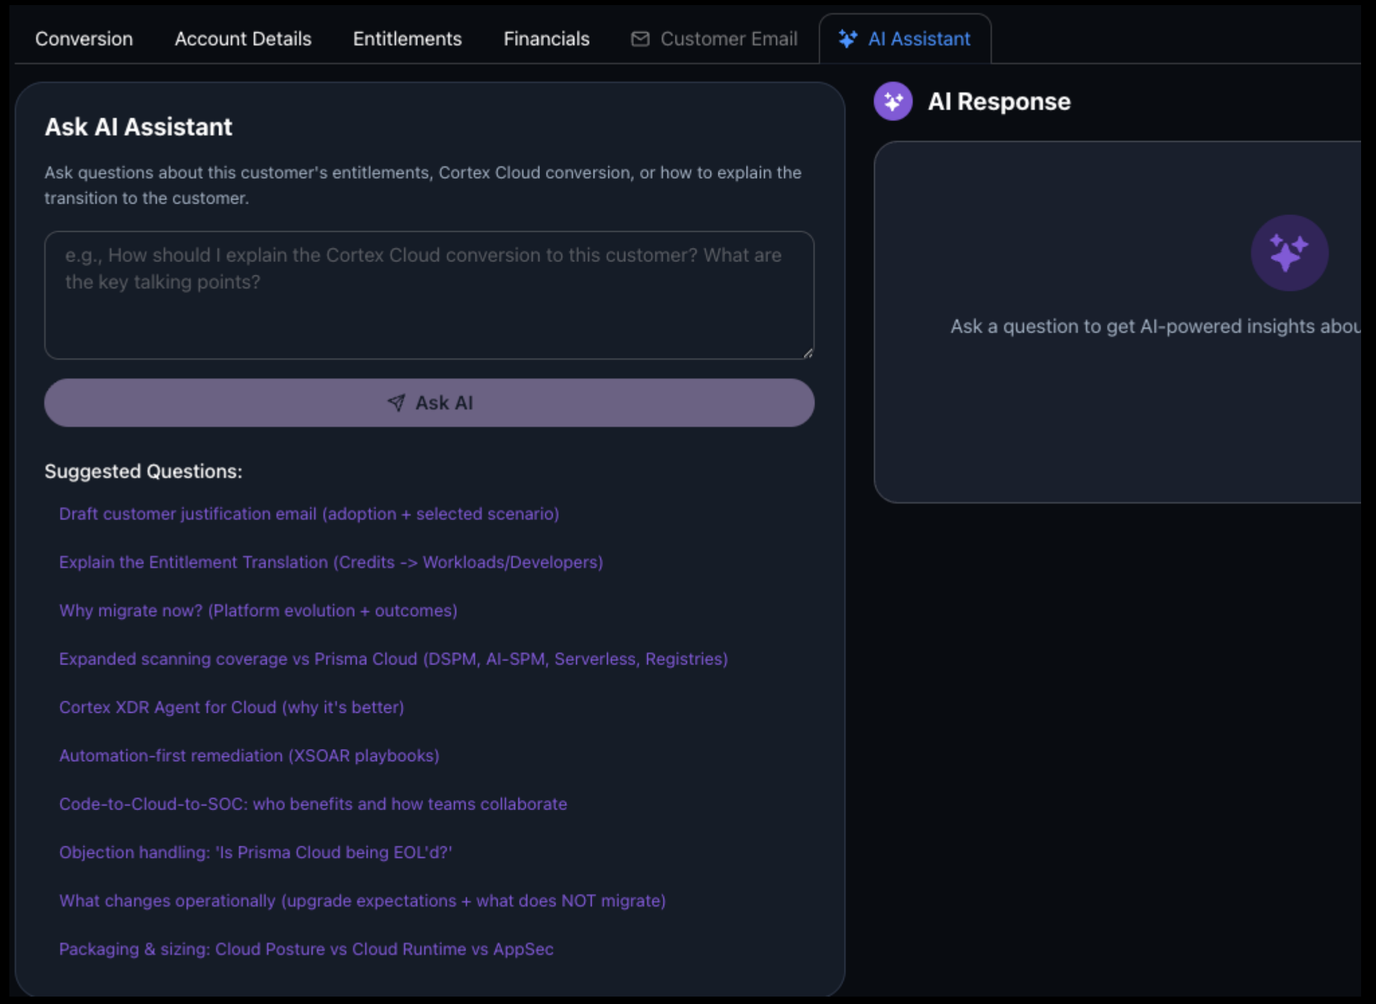

Ask AI Assistant

AI Assistant provides additional context and clarifications.

There are a few pre-built prompts which helps and explain usage/value/objections and more.

Many of the out-of-box use cases will provide and visualize suggestions around how to position Cortex Cloud.

Note: Ask AI Assistant helps with existing data in application. For specific account related questions please reach out to the SPO team or account team

Email Template

Dear Valued Customer,

It's been several months since we launched Cortex Cloud – bringing together the best-in-class CDR from Cortex with our industry-leading CNAPP, Prisma Cloud, for the next generation of real-time cloud security.

In the next few months, we will be gradually upgrading Prisma Cloud customers to the new Cortex Cloud platform to provide you with an even more powerful and streamlined security solution. Throughout this process, customers will be able to experience Cortex Cloud while fully leveraging their operationalized Prisma Cloud environment, helping to make the transition as seamless as possible.

You received an email sharing a brief overview of Cortex Cloud and outlining the upgrade process. In the coming weeks, you will receive a Cortex Cloud tenant that will allow you to experience the new platform and start the upgrade process. As mentioned above, your existing Prisma Cloud tenants will remain active, ensuring full business continuity during the transition period.

As part of the introduction of Cortex Cloud, and based on customer feedback, we have simplified the Prisma Cloud packaging to ensure customers utilize its full value. Going forward, we have three main packages that map to core customer needs:

1. Cortex Cloud Posture Security (https://docs-cortex.paloaltonetworks.com/r/Cortex-CLOUD/Cortex-Cloud-Posture-Management-Documentation/What-is-Cortex-Cloud-Security-Posture-Management):
   - The license includes: Complete Cloud Native Application Protection Platform (CNAPP), including CSPM*, CIEM*, DSPM*, AI-SPM*, Agentless Vulnerability Scanning, ASPM*, ASM* and CI/CD* Security
   - License metered on: number of billable workloads for cloud hosts, container hosts, managed containers, serverless functions, cloud buckets, PaaS* Databases, DBaaS TB Stored, and Unmanaged Assets (only if ASM functionality is turned on) and SaaS users

2. Cortex Cloud Runtime Security (https://docs-cortex.paloaltonetworks.com/r/Cortex-CLOUD/Cortex-Cloud-Runtime-Security-Documentation/What-is-Cortex-Cloud-Runtime-Security):
   - The license includes: All Cloud Posture Security together with everything in the Cortex Cloud Runtime Security package, i.e. CDR*, CWP*, and WAAS*
   - License metered on: number of billable workloads for same cloud resources as Cortex Cloud Posture Security package

3. Application Security Add-ons:
   - The license includes: Application security for IaC*, SCA*, and Secrets scanning
   - License metered on: number of developers
   - This is an add-on to either of the above packages

As part of the upgrade process, we have carefully mapped the existing capabilities you have been using as part of Prisma Cloud, translated them into Cortex Cloud entitlements, and scaled them based on your Prisma Cloud credit utilization. Your Cortex Cloud tenant is scheduled to be configured with the below entitlements to ensure no disruption in capabilities or entitlements from what you have been receiving as part of Prisma Cloud across all your tenants:

Company Name: ACME Corp
- Cortex Cloud Posture Security: 200 workloads
- Cortex Cloud Runtime Security: 0 workloads
- Application Security Add-ons: 0 developers

If you have any feedback regarding your entitlements in Cortex Cloud, would like us to prioritize your tenant for provisioning, or would simply like to discuss them, please contact us.

We understand that change can sometimes be disruptive, and we're committed to making your transition to Cortex Cloud as smooth as possible. We are here to support you! If you have any questions, feel free to reach out to your account team.

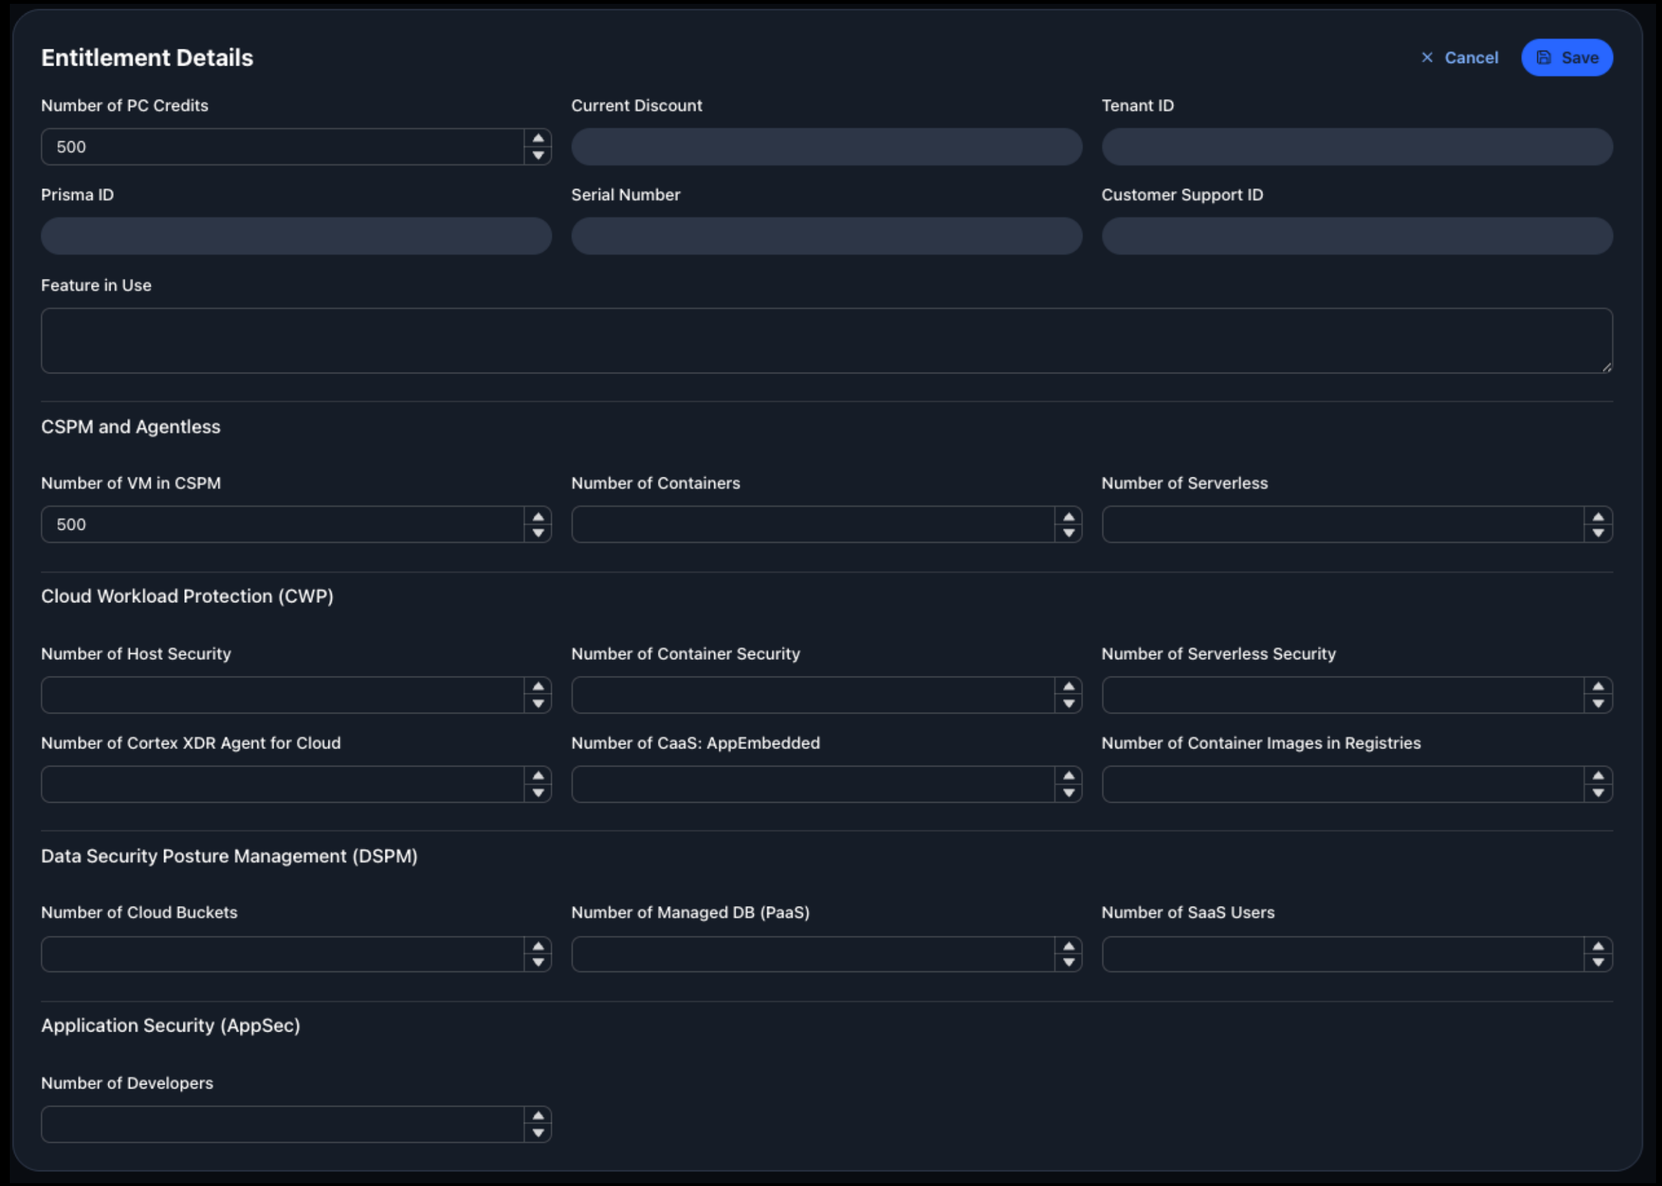

We value your ongoing partnership and trust, and we appreciate your patience and understanding as we make these important changes so that your cloud security remains second to none.

Sincerely,

Entitlement Details

Input new data for license calculation. It automatically translate licenses into POSTURE, RUNTIME & APPSEC.

Finish by clicking on “**Save**”

Conversion Scenarios

There are three conversion scenarios created based on Entitlement Details input:

- **Baseline:** Matching license with 100%
- **Mid:** Matching license between Baseline & High
- **High:** Matching license based on current over consumption

Select scenario by clicking on the “star” symbol.

Note: Conversion is based on preserving the Annual Recurring Revenue (**ARR**) If ARR does not exist, please update that in **Account Details**
