Hello Team,

Reviewed the cases; below are the details.

Case: 04171812
Jira ID: https://jira-dc.paloaltonetworks.com/browse/XSUP-75689

Summary: Customer was unable to find AWS EFS (Elastic File System) resources, specifically Mount Targets and Access Points, within the Graph Search feature of Prisma Cloud. After investigation, the engineering team confirmed that this functionality is a feature request, and the customer was advised to work with their Account or Customer Success Team for such requests. The case was ultimately closed due to customer unresponsiveness after multiple follow-ups.

Next Steps: Case already closed. Account team to file a feature request and involve Guy Giat and Guy Liberman if the customer requires the addition of EFS Mount Target and EFS Access Point asset types to Graph Search.

Case: 04162410
Jira ID: https://jira-dc.paloaltonetworks.com/browse/XSUP-74596

Summary: Issue with incorrect XQL logic in migrated Prisma Cloud policies, specifically an OCI policy incorrectly filtering for GCP assets, was not resolved with a previous release. After further investigation and a new fix deployment, the support team provided a list of updated policies with corrected XQL, and the case is currently pending customer

validation.

Next Steps: Engineering team has provided a list of updated policies with corrected XQL and we are waiting for the customer to validate these policies to confirm the issue is fully resolved across all affected policies.

Case: 04157364
Jira ID: N/A

Summary: The customer is experiencing an issue where their XDR Agent on an AWS Bottlerocket OS EKS cluster is incorrectly operating in Kernel mode and showing as 'Unprotected', despite being configured for User Space mode. The root cause has been identified as a network connectivity issue preventing the agent from downloading necessary content, and the customer's team is currently investigating this.

Next Steps: The customer is currently investigating the network connectivity to the required content URLs to ensure they are not being terminated by firewalls or proxies. Support is awaiting an update from the customer's team regarding the outcome of this investigation.

At this time, the TAC cases are making good progress. If there is anything else needed from my side, please feel free to reach out.

Thanks,
Syed Rizwan Hasnain
